- → Structure - Premium and Discount
- → Practical examples
  - Case study 1 (H4 - H1 - M15 - M1) PowerPoint + PNG
  - Case study 2 (H4 - H1 - M15 - M1) PowerPoint + PNG
  - Case study 3 (H4 - H1 - M15 - M1) PowerPoint + PNG
  - Case study 4 (H4 - H1 - M15 - M1) PowerPoint + PNG

@SmartMoneyCourse

FOREWORD

Who is this trading plan for?
It is intended for traders:

- who understand the basic concepts of supply and demand, market structure and liquidity
- who have difficulty synthesizing all of the concepts to formulate a trading plan that works on a daily basis on the financial markets

It is also important to specify:
This trading plan is my personal plan. It is the result of more than 3 years of experience on the markets and is based on several hundred setups mixing case studies/backtesting and real executed positions.

This plan is not discretionary, i.e. it leaves no room for doubt or hesitation: either the criteria are present and we execute the order, or they are not and we wait for the next signal. This is what makes it extremely efficient. The decision making is fast and the management system allows us to completely control our emotions.

However, keep in mind that we are all different and we all have our own way of seeing and approaching the market.
Therefore, I advise you to do your own tests and adjust this plan to your own style and personality.

GLOSSARY

POI: Point of Interest
Premium: area where the price is considered to be high
Discount: area where the price is considered to be low/cheap
BoS: Break of Structure
CHoCH: Change of Character (change of trend)
Long: buy position
Short: sell position
OB: Order Block
SD Flip: Supply to Demand flip
DS Flip: Demand to Supply flip
BE: Break-even
HH : Higher High
HL : Higher Low
LL : Lower Low
LH : Lower High

@SmartMoneyCourse

On the charts, 3 timeframes are used for the POI. They are indicated inside the POI, right side in the middle:
« 4 » = 4 hours
« 1 » = 1 hours
« 15 » = 15 minutes

TRADING PLAN

PREPARATION

<u>H4 Timeframe:</u>

→ Identify the trend by marking the HH-HL / LH-LL
→ Draw the Supply and Demand zones (POI)
→ Identify the Premium/Discount price zone

<u>H1 and M15 Timeframe:</u>

→ Draw the Supply and Demand zones (POI)

EXECUTION CRITERIA

@SmartMoneyCourse

<u>M1-M5 Timeframe:</u>

1. The price enters inside a POI

2. Price is in the right Premium / Discount zone
   - Premium for a downward setup (short)
   - Discount for an upward setup (long)

3. The price pulls back before coming back to sweep the liquidity left by the retracement inside the POI

4. The price makes at least a CHoCH and preferably a Flip as well

5. Draw your OB at:
   - the 1st unmitigated candle from the extreme (extreme)
   - and/or the unmitigated candle that is the origin of the flip (decisional)

TRADING PLAN

NOTES

→ An OB is valid as long as the price does not perform our execution criteria inside an opposite POI.

→ A POI is valid as long as it is not broken by a candle (1m-5m) with body closure.

→ A POI is considered mitigated as soon as a liquidity sweep inside has occurred.

→ If an EQH/EQL forms after the sweep, at my OB, the entry becomes invalid until a new sweep (+ CHoCH & Flip) takes place.

→ It is possible to override the Premium / Discount zones when the setup follows the HTF trend.

@SmartMoneyCourse

TRADING PLAN

RISK MANAGEMENT

→ Risk per position: 0.5 to 1%

→ Entry level: 0% or 25% of the OB (personal preference)

→ Stop Loss: place the stop at 0.5 pip (+ spread according to your broker) behind the OB, mininum 1.5 pips, maximum 5 pips

→ Maximum number of losses: 2 per day

TRADE MANAGEMENT

→ Breakeven:

- At the first BoS on the 1m...
- ...or close 25% of the position at 4R and leave the stop where it is.

@SmartMoneyCourse

→ Trade management:

- Conservative management (recommended for counter-trend): move the stop following the HL or LH created by the price, following the structure breaks on the 1m.
- More open management (recommended for pro-trend): either BE or TP.

→ Target: next POI. Generally speaking, I place my TP 1 pip before the POI.

→ Partial exits: I don't do any, I always go in and out full volume, but this is a personal preference.

→ Scale-in: possible as soon as the previous position is BE, so as to never increase our initial risk.

CONCLUSION

Now you know how I operate in the market on a daily basis. My goal was to create a plan that left as little room as possible for doubt and hesitation, and that could be executed as simply as possible.

Again, I would encourage you to do your own testing to make any necessary adjustments.
This plan has been executed long enough for me to know that it works in the long run. Therefore, it is the trader's own psychology that will determine whether or not he or she will benefit from it.
You need to have enough confidence in your plan to be able to execute a setup when it comes along, without the slightest hesitation, in a totally mechanical way.

I would suggest to hang the following sentence on a wall:
"If the x criteria of my plan are present, I MUST execute. The rest is out of my control."
This sentence should be visible from anywhere in your office.

I remain available on Instagram to answer any questions you may have.
Thank you for your trust and see you soon!

PS: This guide took me a lot of time and energy to create. I sincerely hope you will find value in it as an help to achieve your goals, as it does for me on a daily basis. As a result, I would be grateful if you would consider using it for a strictly personal use and not share it. Thank you!
