ZCFX METHOD

9 STEP APPROACH

ZEUSCAPITAL

Luke Thomas

9 STEP PLAN!

Step 1: What is the Order Flow?

Use the 4 Hour, Daily & Weekly to find the Structure of which the Market is Heading, find HHs / HLs & LHs / LLs.

Step 2: Any Valid POIs on the H4?

Use the 4 Hour to find your Point of Interests, Look for Valid Supply / Demand Zones.

Step 3: Do you need to Refine any POIs?

Are you happy with how big the Supply or Demand Zone is? Or do you want to Refine it, if so, use the H4-H1 Time Frame (Lower than H1 if Necessary)

Step 4: Wait for Price to come near POI.

Now it's time to Sit on your Hands until price is near or at the Point of Interest.

Step 5: Look for Confirmation Entry.

Once Price is Near our POI, we then jump onto the Lower Time Frame, preferably the 5M & await for a Break of Structure.

Step 6: From the 5M, Refine on 1M.

If found a 5M BOS, Look for a Valid S/D Zone. Then drop to the 1M & again, refine the S/D Zone if necessary!

Step 7: Factor in Confluences!

Before entering the Trade, make sure you have drawn up the Momentum, Premium / Discount Zone etc.

Step 8: Enter the Trade.

Now you have identified your Supply / Demand Zone, A BOS, Confluences etc. We now simply look to mitigate the Supply / Demand Zone!

Step 9: Manage the Trade.

Now once we are in the Trade we simply want to Manage it by mapping out the Ranges & if price turns in the opposite direction breaking structure, we close.
