Chapter: ENTRIY POINTS

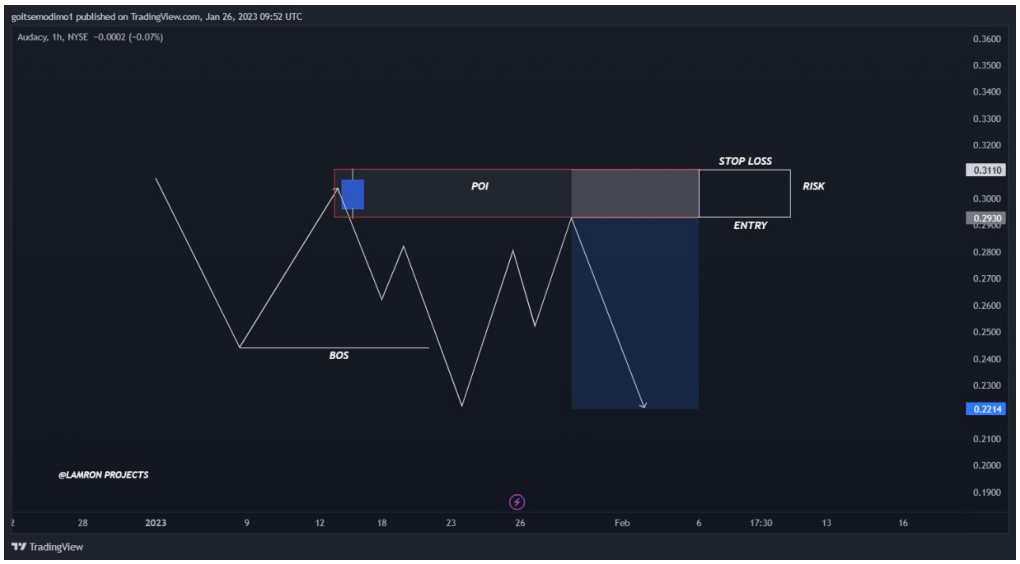

On This Chapter We Are Mainly Focusing On Types Of Entry Points,
That You As Traders Are Look Forward To Taking Them
Within The Markets. We Also Have A
Chapter That Has Confirmation Entry Points And This
Chapter It's About What We Call Types Of Entry Points So
Do Not Confuse The Two.
You Must Understand That Before You Have A Confirmation
You Need To Know The Type Of Entry Point
You Need To Take.

ENTRY POINTS.

-We Only Have Three Types Of ***Entry Points*** , We Have What We Call ***Fibonacci 50% Entry ,*** The ***Wick Entry Point,*** And We Also Have The ***Body Entry Point.***

WICK ENTRY POINT.

EXAMPLE OF A WICK ENTRY ON A BEARISH TREND.

- What's Happening Here Is That We Are Currently On A Bearish Trend , As We Can See That Market Created An Impulse To The Downside And Creates A Correction Leaving A Lower Low Then Price Breaks Our **LL ,** Creating A Break Of Structure Then Market Grabs Its Liquidity. Which Means From There Price Needs To Go To Our **POI** (Point Of Interest) In This Scenario Our **POI** It's A Supply.

-So What Happens Is That Market Will Not Go Inside Our Orderblock, Price Will Just Tap Into Our Wick Of The Orderblock And Pushes To The Downside Afterwards .

-This One We Call It A Wick Entry Point Because Market Taps Into Our Wick Of An Orderblock And Pushes Down Impulsively.

EXAMPLE OF A WICK ENTRY ON A BULLISH TREND.

ADVANTAGES AND DISADVANTAGES OF A WICK ENTRY.

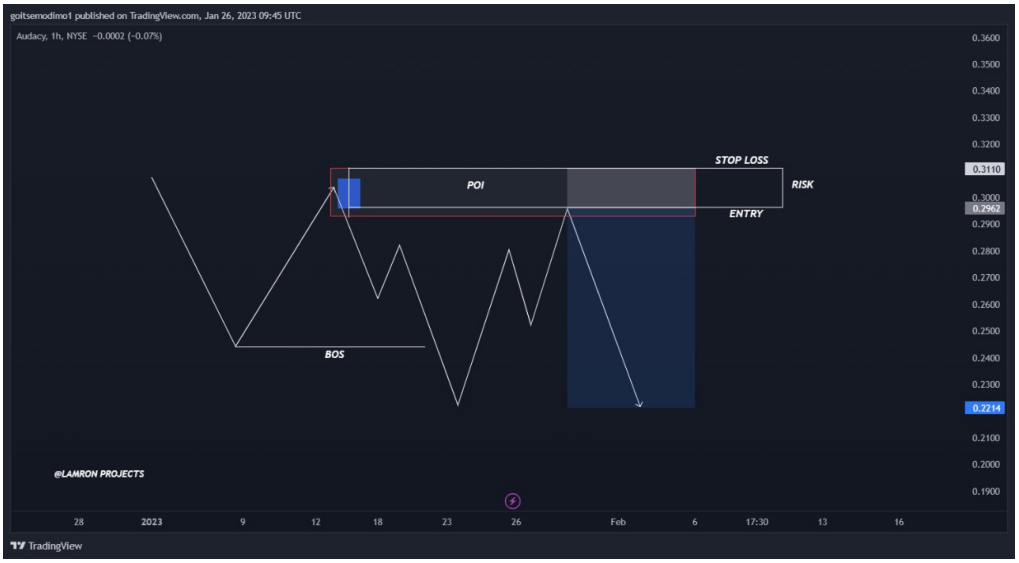

•Most Of The Time ,Market Goes For The Wick No Matter What, **But Then** Sometimes Market Will Go Inside Your Orderblock.

•Wick Entry Point It Is Good Because Your Trade Will Always Be Activated.

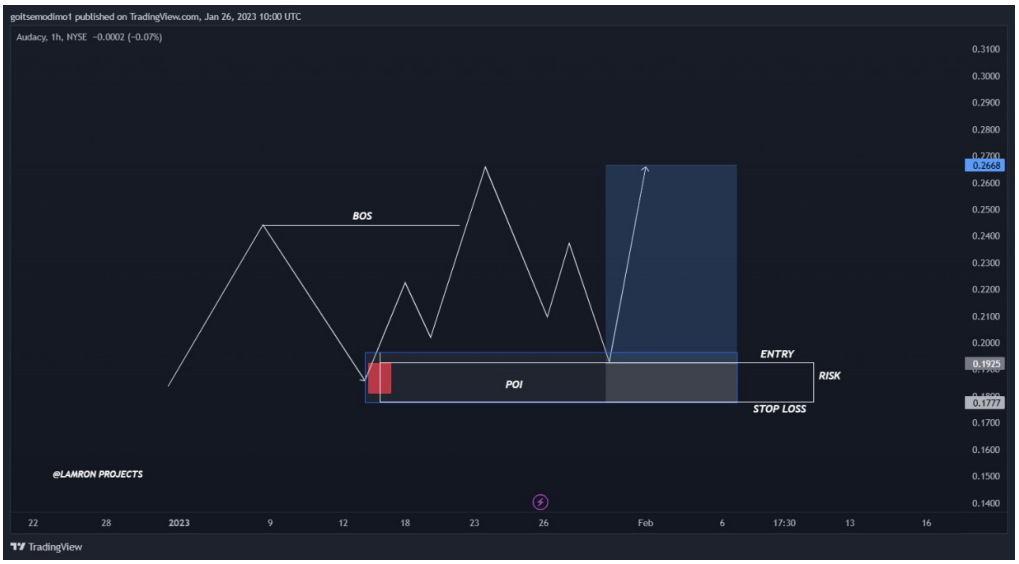

•And The Bad Thing About It It's The Risks, Because Since Well You Take An Entry From A Wick Which Means There Are A Lot Of Pips That You Gonna Risk From The Low Of That Wick To The High Of That Wick Depending On That Particular Candlestick.

BODY ENTRY POINT.

EXAMPLE OF BODY ENTRY ON A BEARISH TREND.

EXAMPLE OF A BODY ENTRY ON A BULLISH TREND.

•In This Case Instead Of Taking And Entry On A Wick , You Going To Take Your Entry From The Beginning Of The Body Of The Candlestick Which Is Your Orderblock.

•It Has Less Risks Than The Wick Entry Point Because It's Going To Be Some Few Pips That You'll Be Risking.

FIBONACCI 50% ENTRY POINT.

EXAMPLE OF A FIBONACCI 50% ENTRY ON A BULLISH TREND.

•Here We Are On A Bullish Trend ,Market Breaks A **HH (**Higher High**)** **...**Creating A **BOS** (Break Of Structure) And Grabs Its Liquidity.

•After Market Grabs Its Liquidity Price Then Pushes To The Downside Afterwards, So Once Price Taps Into Your Entry Point You Going To Have Your Orderblock Which Is The Last Selling Candlestick The Market Left Before It Went Up As Shown Above.

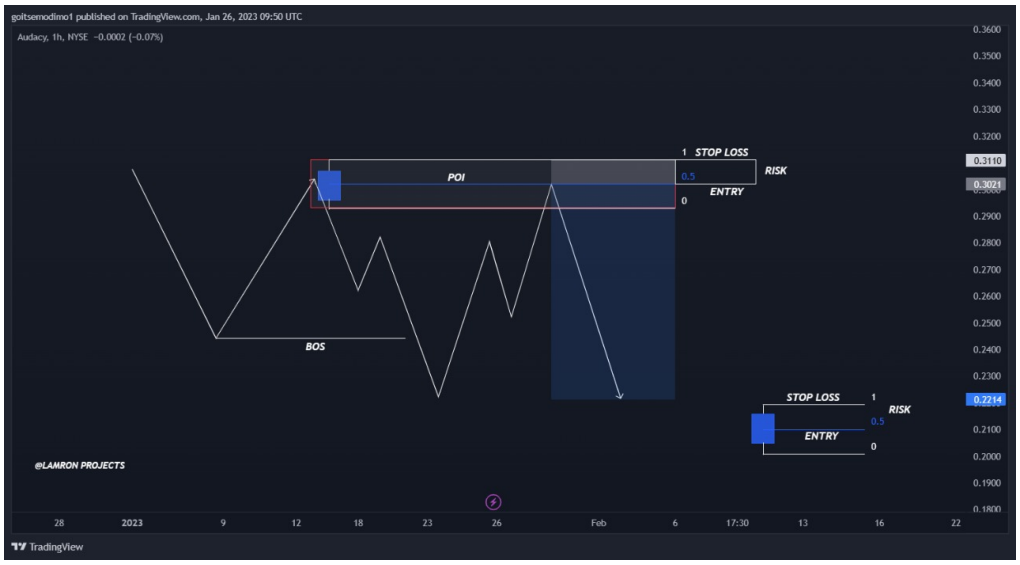

•...You Going To Take Your Trade Or Entry In The Following Manner.

•What You Need To Do Is That You Need To Have Your **50% Fibonacci** (*I've Illustrated How To Setup A 50% Fibonacci On A Chapter Of* ***IMBALANCE***).

•So With That Fibonacci You Going To Measure The Whole Candlestick As Shown On The Top Left Of The Structure Above.

•So Fibonacci 50% Entry It Has Less Risk Because You Enter At The Middle Of The Candlestick, And On That Half Of That Candlestick You'll Find Yourself Risking About 5 Or 6 /10 Pips. (but not too many pips)

EXAMPLE OF FIBONACCI 50% ENTRY ON A BEARISH TREND.

[These Are The Three Entry Points That You Need To Know , Because Nobody Knows Which Entry Point Market Needs To Respect Most Of The Time Neither I Do.]
