# SMART MONEY CONCEPT SIMPLIFIED

**By:Goitse-Modimo Odirile Mathibe**

## Chapter: INSTITUTIONAL ORDERFLOW.

This Chapter It Is About Institutional Orderflow And We Have Another Chapter Which Is About Daily Pip Cycle,
I Know Sometimes It's Quite Difficult For You To Differentiate The Two.

**INSTITUTIONAL ORDERFLOW.**

-I Chose This One An ***Institutional Orderflow*** , An Orderflow Means A Repetition Of Something That Happens Over And Over Again. Those Are The Ongoing Phases Of The Market.

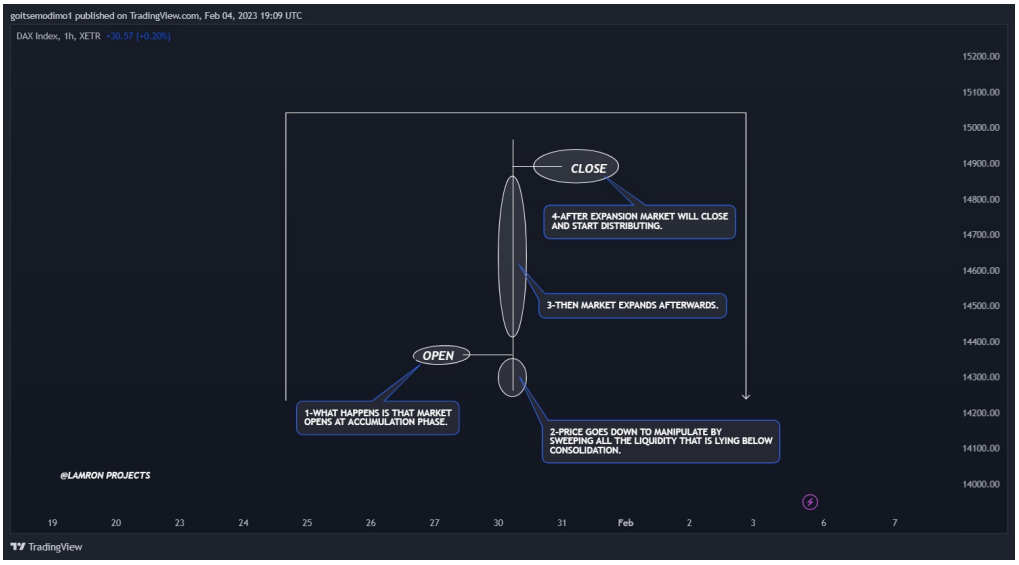

-Those Phases Are **Accumulation, Manipulation, Expansion** And **Distribution.** Those Are The Four Phases That You'll Need To Know About This Chapter.

•When We Talk About ***Accumulation*** We Simply Say Market Is Ranging Within One Phase Which Is Consolidation Phase.

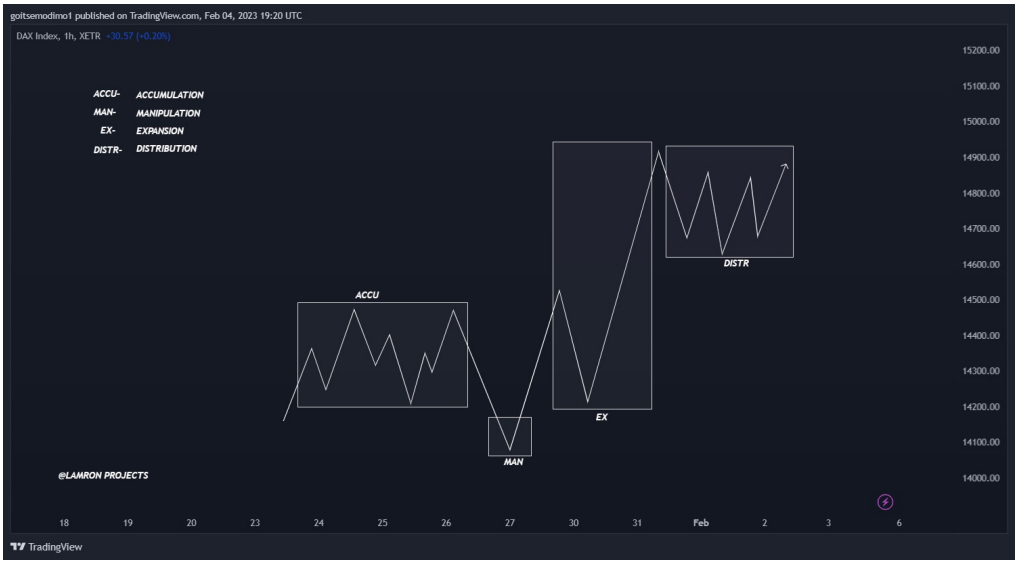

•And Whenever Market Is Ranging, Price Will Leave Some Sort Of Liquidity Below And Above That Consolidation Phase. What Happens Is That Market Will ***Manipulate*** By Taking Out The Liquidity.

•After Sweeping The Liquidity, The Market Will ***Expand*** , At The End Of That ***Expansion*** Market Will Start ***Distributing.***

**INSTITUTIONAL ORDERFLOW ON A BULLISH TREND.**

-That's Just A Diagram Now Let's Put It On A Market Structure.

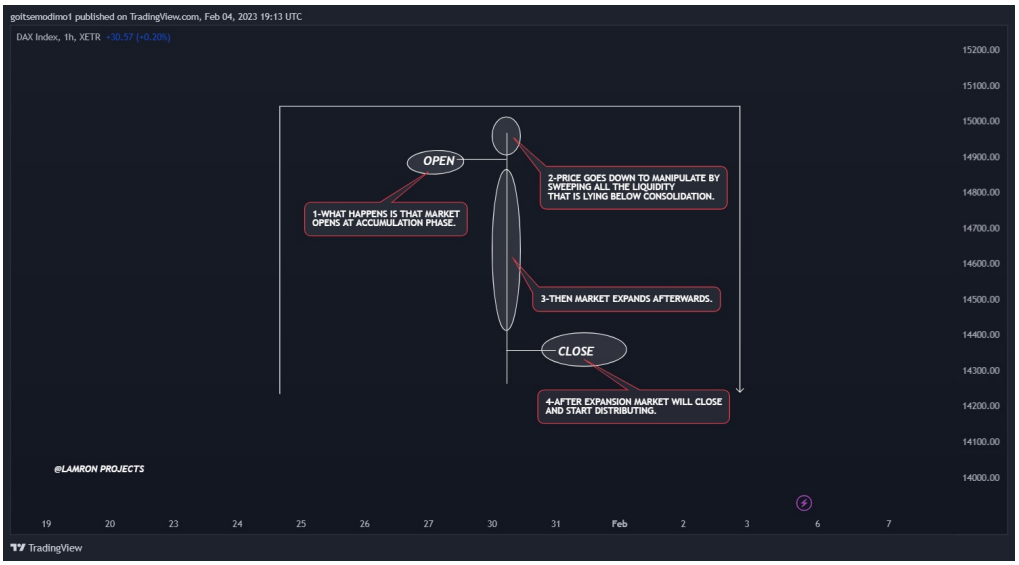

•Like I Said Technically On Consolidation We Know That Market Accumulates ,It Ranges Within One Phase.

•Then After Accumulation Phase Market Will Push A Lil Bit To The Downside To Manipulate Retail Trader's Stop Loss By Sweeping The Liquidity.

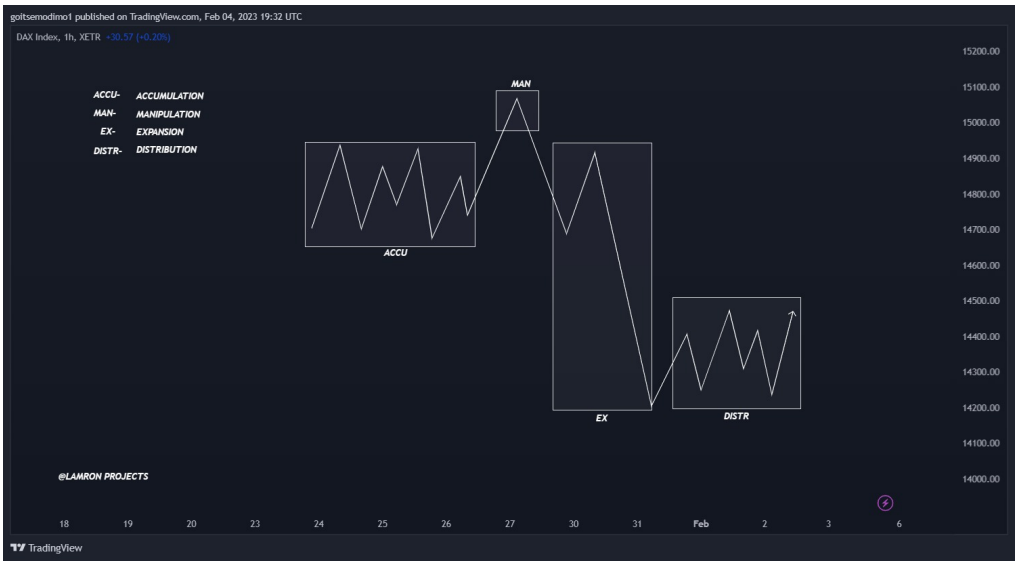

•When Market Starts To Expands I Normally Look For Trades .Whenever You Looking For Buying Opportunities After Manipulation You Should Look For A Change Of Market Character That Is Pushing To The Upside.

•Then When That Expansion Phase Comes To And End That's When Market Will Start Distributing.

**INSTITUTIONAL ORDERFLOW ON A BEARISH TREND.**

*Market Structure.*

•Same Scenario Happens On A Bearish Trend , Remember With **SMC** What Happens On A Bullish Trend It's The Opposite Of What Happens On A Bearish Trend.

•Even Here During Accumulation Phase Market Consolidates Or Ranges Within One Phase.

•Then After Ranging Market Will Simply Manipulate By Taking All The Liquidity That Is Lying Above In A Form Of Stop Losses.

•Like I Said If You Want To Trade Manipulation You Should Always Wait For A Change Of Market Character That Pushes To The Downside.

•After Taking Those Trades Market Will Expand. And At The End Of That Expansion That's When Market Will Start Distributing.
