Chapter: MARKET CYCLE

This Chapter Is About The Theory Of Market Cycles.
There Are A Lot Of Cycles Within The
Markets ,That Everyone Experience But They
Are Not Aware Of Them So I'm Going To Take Y'all
Through This One Called Market Cycle.

MARKET CYCLE.

•*Market Cycle Simply Refers To The Movement That Occurs When Price Gain Power , To It Losing Power And Gaining New Strength.*

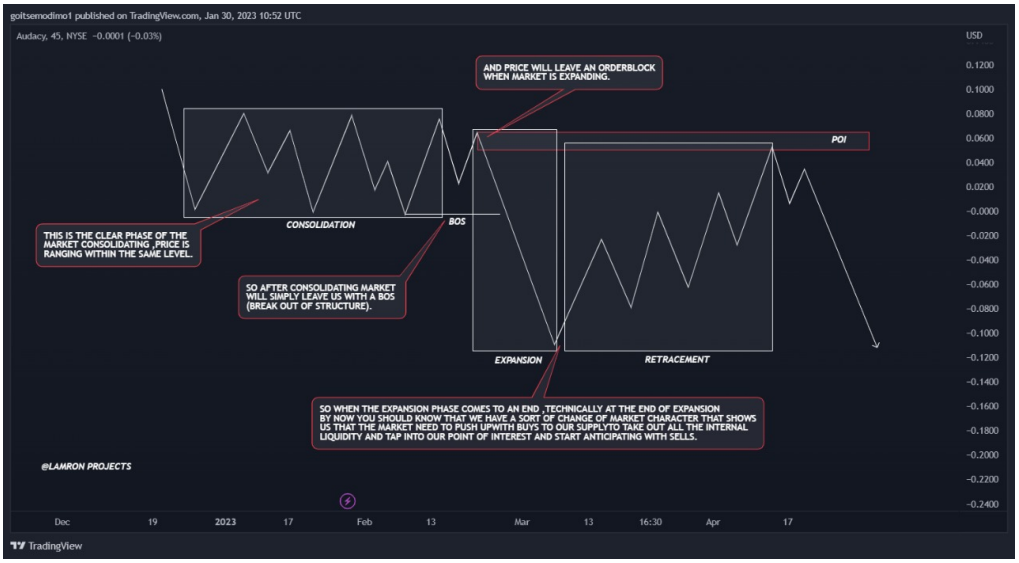

•Within Our Market Cycle We Are Going To Talk About The Three Cycles Which Are ...***Consolidation, Expansion And Retracement*** . These Are Three Phases We Gonna Talk About.

•The ***Consolidation*** Occurs When Market Is Simply Doing What? **Ranging** , Which Means There Is No Clear Direction Within Then Markets .And Then The Market Will Need To Leave That Consolidation Phase.

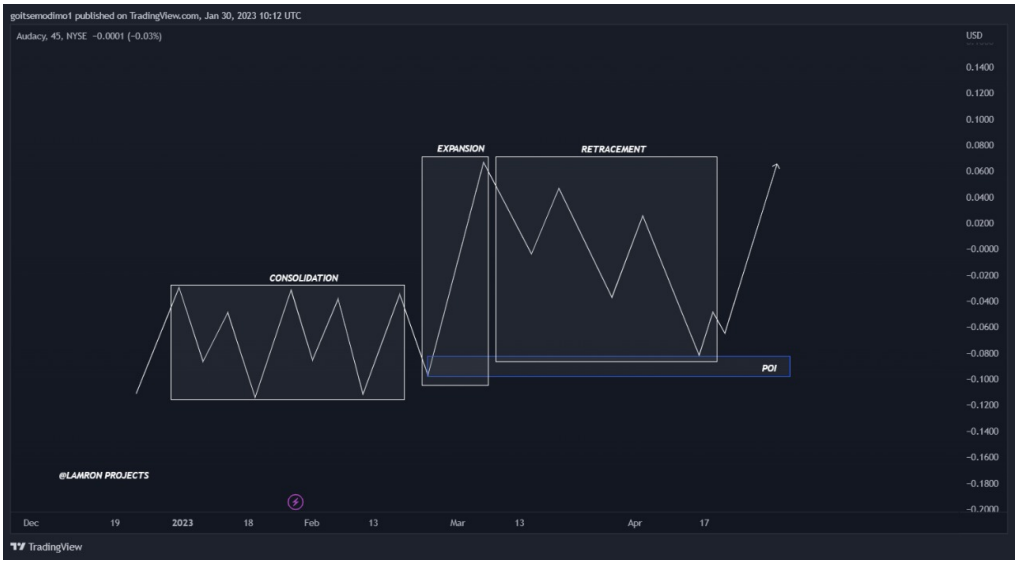

•Once Market Leaves That Consolidation Phase,That Is Simply Referred As ***Expansion*** So Within The Expansion The Market Will Need To Leave An Orderblock Because Technically Price Is Breaking A Certain Structure Of Consolidation Phase It Can Be A Low Or High.

•What Will Happen Afterwards Is That The Market Will Have To ***Retrace*** That Point. When The Market Retraces Its Main Goal Is To Fill All The Liquidity That The Market Left , All The Internal Range Liquidity, All The Imbalances Or Fair Value Gaps And From There Price Will Tap Into A Certain Supply Or Demand And Start Taking The Overall Direction Of The Market.

HOW MARKET EVOLVES ON A BEARISH TREND.

HOW MARKET EVOLVES ON A BULLISH TREND.

This Is The First Example Of Market Cycle , On The Next Chapter I'll Be Talking About ***Daily Pip Cycle*** *Which Involves Time,Accumulation, Manipulation, Distribution etc.*
