S2D Flip Entry Model

Supply zone fails and flips to Demand zone. Valid entry when BOS and CHoCH confirm demand takeover.

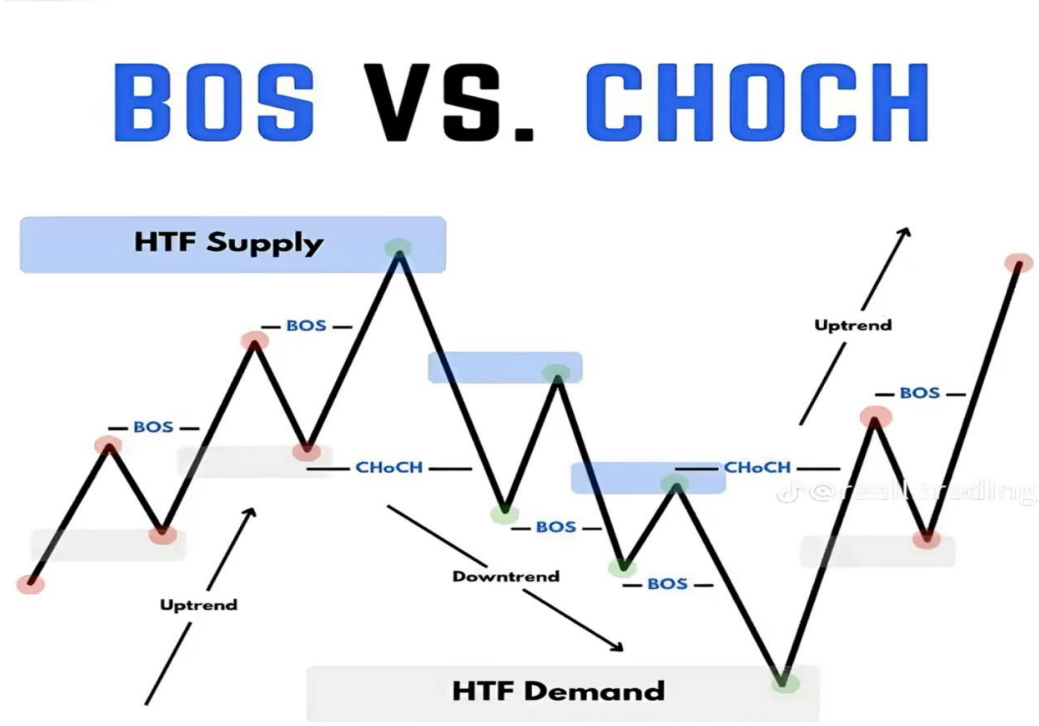

Order Flow Shift

Order flow changes when higher highs (HH) and higher lows (HL) structure shifts to lower highs (LH) and lower lows (LL).

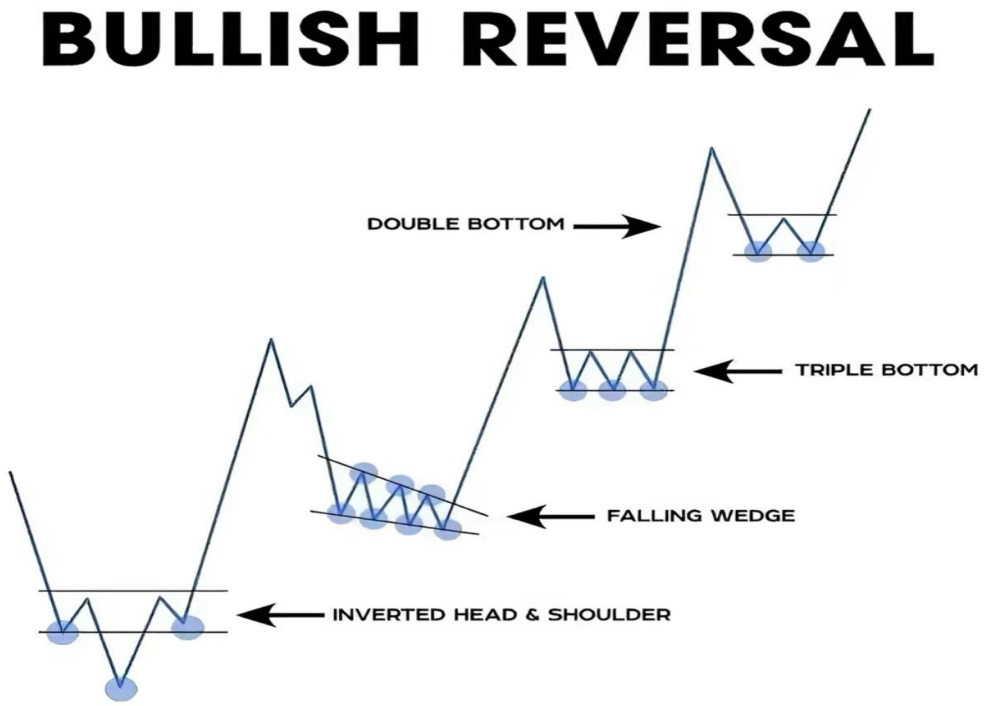

BOS vs CHOCH

BOS confirms trend continuation, while CHoCH signals potential trend reversal.

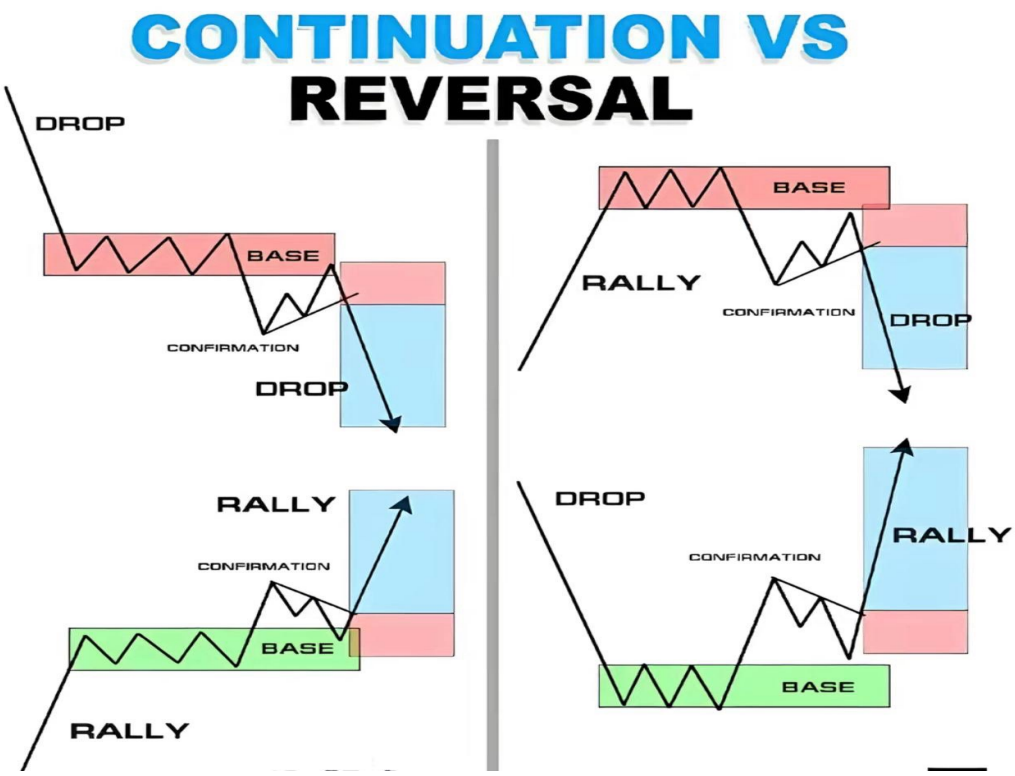

Bullish Reversal Patterns

Common bullish reversal setups include double bottom, triple bottom, falling wedge, and inverse head & shoulders.

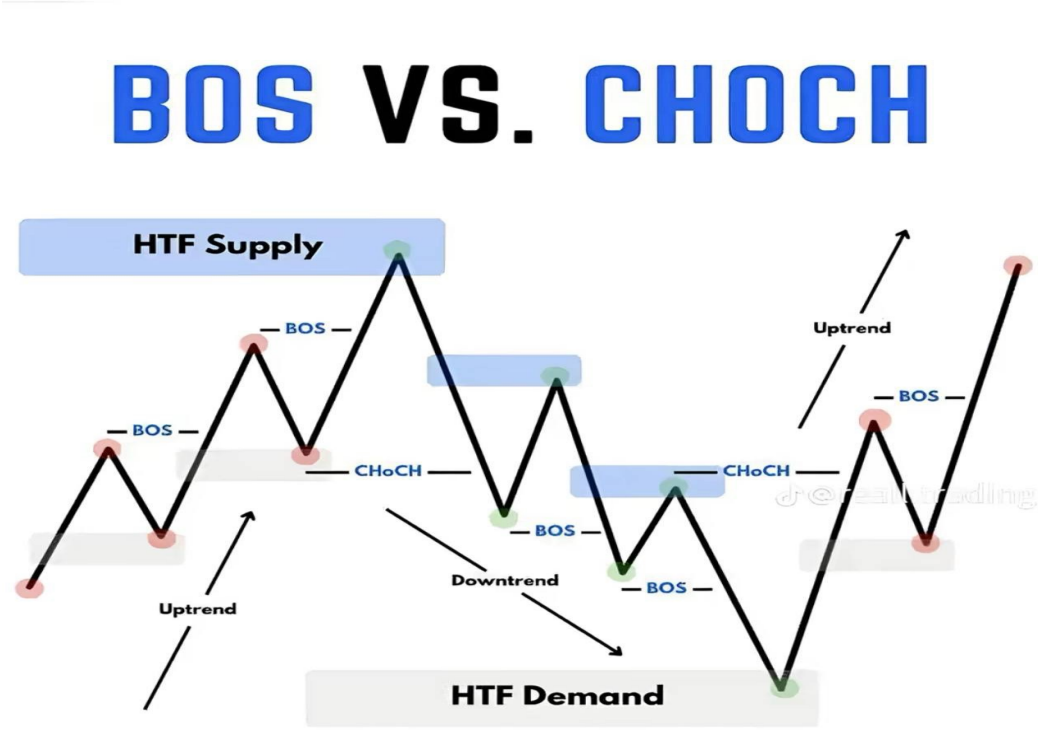

Continuation vs Reversal

Distinguish between continuation (trend resumes) and reversal (trend changes). Confirmation is key.

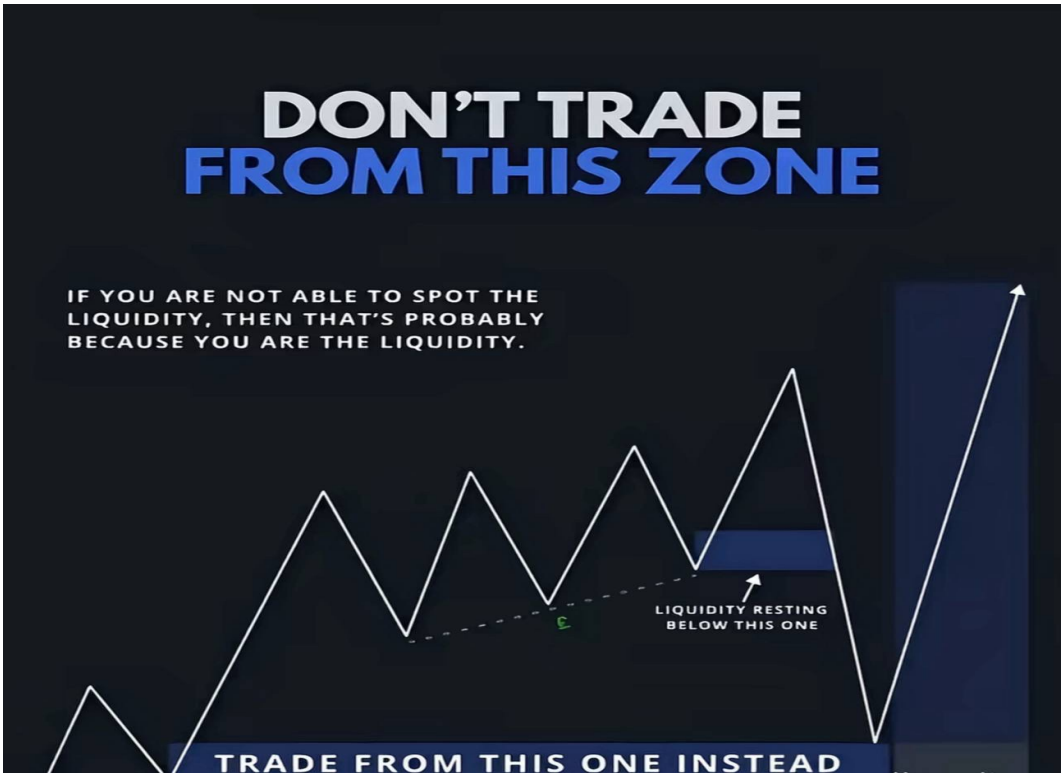

Don’t Trade Wrong Zone

Avoid entering from weak liquidity zones. Trade from areas with strong liquidity buildup.

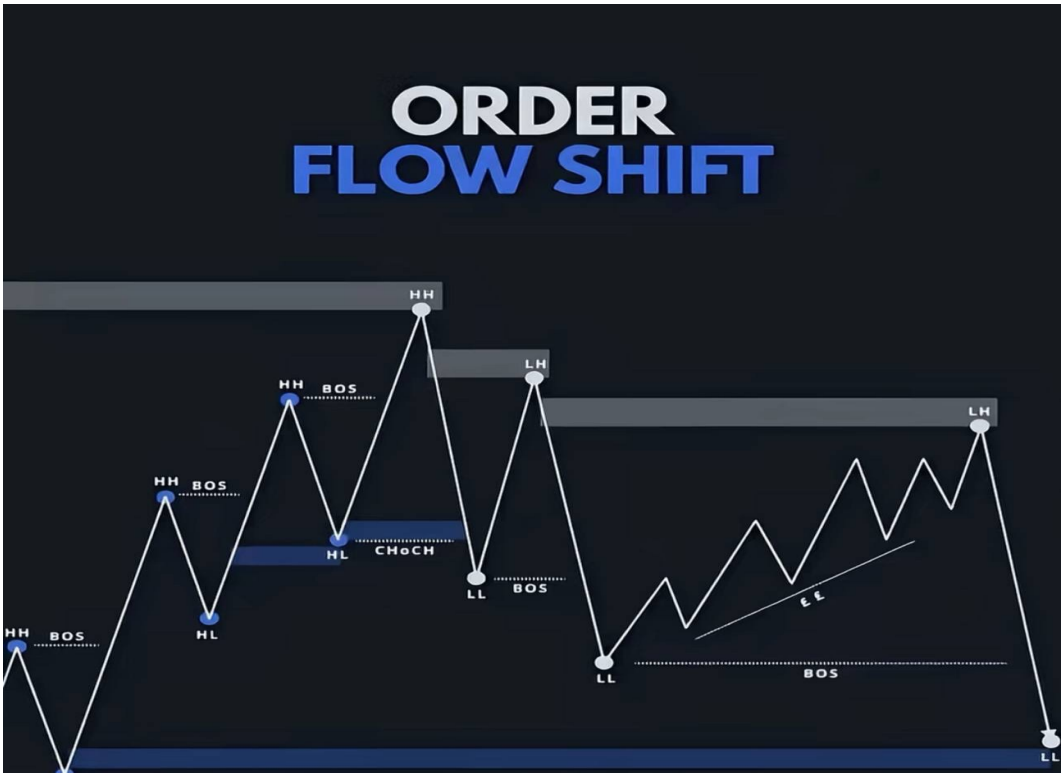

Order Flow Shift (Extended)

Extended order flow showing transitions between strong highs/lows and liquidity sweeps.

CHOCH vs BOS in HTF Zones

CHOCH signals early reversal while BOS confirms. Always read in HTF supply/demand context.

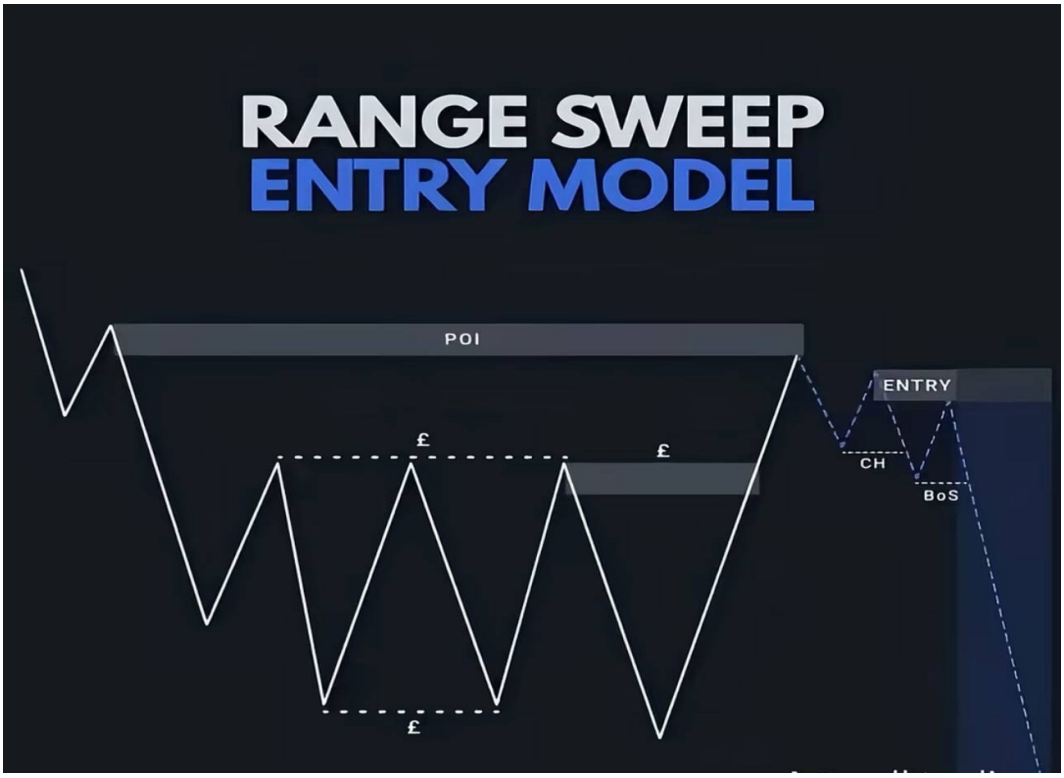

Listen to the Market

Market tells a story through strong/weak highs and lows. Learn to identify weak points and mitigation zones.

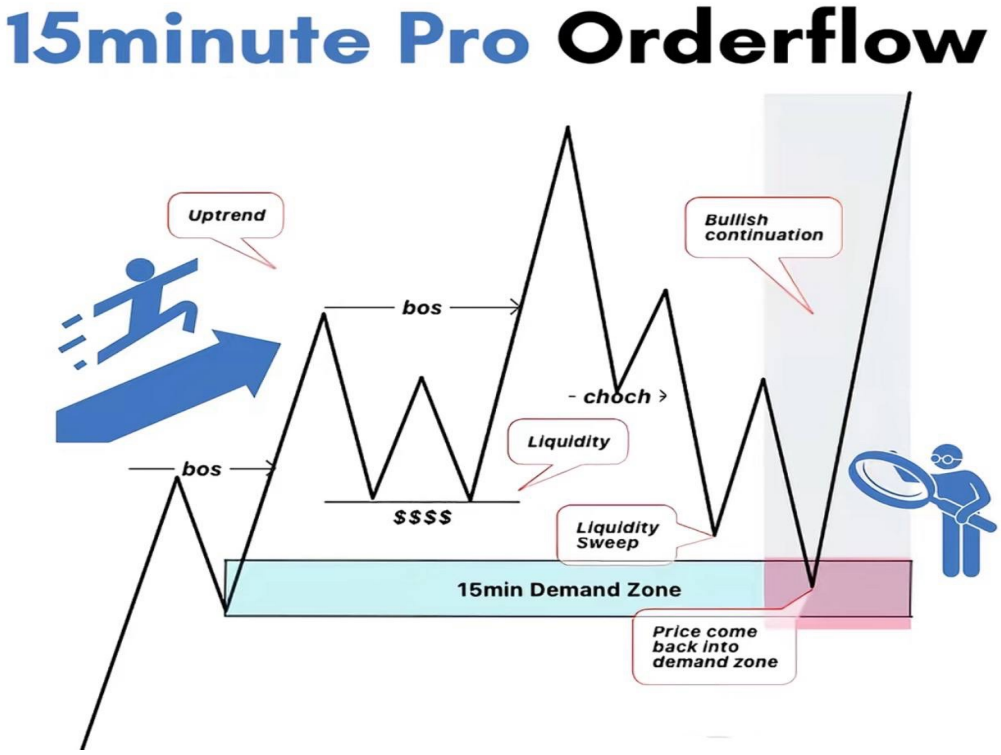

Range Sweep Entry Model

Price consolidates, sweeping liquidity on both sides before confirming entry at POI with CHoCH and BOS.

15-Min Pro Orderflow

Intraday model using BOS, CHoCH, liquidity sweeps and demand zone retests for precise continuation entries.

Extra Advanced Illustration

An advanced schematic summarizing mitigation and liquidity behavior across structures.
